20,000 kPa@15°C equates to a pressure of 23,000kPa@65°C.

- ٠ Encapsulated Seat Technology (EST) ensures superior performance, accuracy and resistance to 'surging'
- Large diameter diaphragm gives a performance that is normally only found in double stage regulators
- Triple filter system increases the regulator performance by preventing foreign particles from getting in contact with the high pressure gas or the regulator seat
- ٠ No tools are required to routinely disconnect the regulator from the cylinder valve
- A safety relief valve is built in to the regulator to protect staff and patients in the event of high pressure failures
- Tamper resistant design to ensure only qualified personnel can access the regulator
- Colour coded pressure gauges and identification labels for quick recognition of the gas used by the regulator
- Gas specific inlet fittings and outlet fittings to prevent fitting to the wrong gas type
- Weighs approximately 920 grams

Applications:

The Series-O regulator has been the industry leader for regulators in Australia for years. The simple but effective design and ease of use make this single stage regulator a very low maintenance yet high performing product: one that can be used in a variety of environments.
