Intensive Care Unit Staff	Accident & Emergency Staff	Rapid Response Teams
Hospital Managers / CEOs	Hospital Pharmacists	Clinical Directors
Purchasing Managers	Nursing Managers	Supplies Managers
Risk Managers	Resuscitation Officers	Hospital personnel

Please distribute copies and bring this Product Correction to the attention of ALL who need to be aware of it.

Dear Healthcare Professional,

Link Medical Products, after consultation with the Therapeutic Goods Administration (TGA), is issuing a Product Correction relating to ADRENALINE-LINK PFS (**batch 0161123**). We are contacting you as the potentially affected batch was supplied to your organisation.

Background

ADRENALINE-LINK PFS is currently supplied in a twist box sealed with closure labels at both ends. As the labels on the twist box at times appear to realign upon closure, this may result in twist boxes with empty syringes being placed back on the crash trolley instead of being discarded per local procedures.

This Product Correction provides information to mitigate the risk of empty syringes being placed back into circulation and potentially delaying the delivery of an emergency medicine. If an empty syringe is not identified prior to use, treatment may be delayed while a replacement product is obtained. Delays in the administration of adrenaline during an emergency situation may adversely affect patient outcomes.

Figures 1 & 2: Current appearance of closure labels in unopened/intact ADRENALINE-LINK PFS twist box.

Figure 1: green-and-white striped closure label (unopened/intact)

Figure 2: white closure label (unopened/intact)

Closure labels on the twist box may occasionally appear to realign after the box has been opened and re-closed. Therefore, prior to use, both end labels should be visually inspected to help identify previously opened packaging and detect any used or empty syringes that may have been inadvertently returned to the twist box and subsequently returned to stock.

Figures 3 & 4: Example of appearance of current closure labels following opening and re-closing of ADRENALINE-LINK twist box - Lot number 0161123.

Figure 3: green-and-white striped closure label (opened)

Figure 4: green-and-white striped closure label (opened)

Actions

1. Inspect both ends of the ADRENALINE-LINK PFS (**batch 0161123**) twist box and verify that the closure labels are intact prior to use.
2. Follow local procedures for the handling and disposal of used or empty ADRENALINE-LINK PFS packaging and syringes.
3. Be aware of the updated closure label design that has been introduced in future batches to support identification of previously opened packaging.
4. Fax or email the completed response form to customerservice@linkgroup.com.au or contact LINK Customer Service on **1800 181 060**.
5. Please share this information with healthcare professionals and other staff involved in the use, storage, or management of ADRENALINE-LINK PFS.

Closure Label Design Update for Future Batches

The manufacturer has developed an updated closure label design that will be available for future batches. The revised design will incorporate a jagged asymmetrical cut pattern when opened, providing a clearer visual indication that a twist box has been previously opened, including where it has subsequently been re-closed.

Best Regards,

Lisa Cronin
